

## Advance Computer network PCS223

### Assignment-7

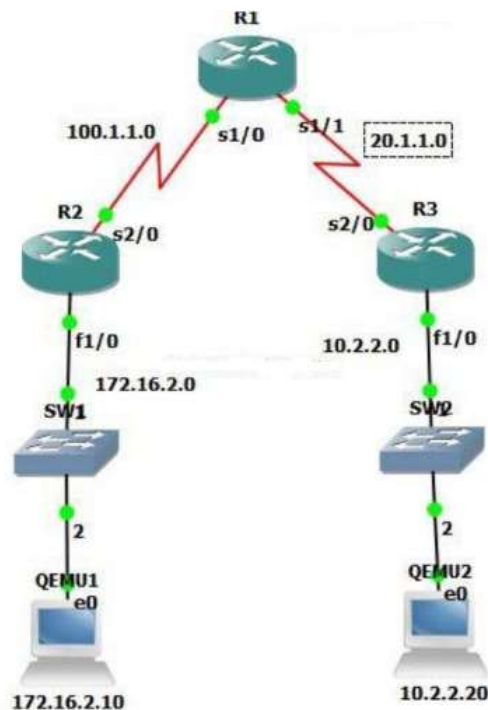

Pranav Bhardwaj 8025320073

#### Objective

1. To understand the Link State Routing algorithm (OSPF)
2. To configure and verify OSPF routing in a network
3. To analyse how Shortest Path First (SPF) algorithm works

#### Problem Statement

Design and implement the given network topology with three routers (R1, R2, R3), two LANs, and PCs. In addition to configuration, analyse route selection using OSPF cost and SPF algorithm

#### Network Topology & IP Addressing

- 3 Routers: R1, R2, R3
- 2 LANs
- Serial links between routers
- PCs connected to R2 and R3
